

POET

Marion, Ohio

POET Biorefining:

Marion began operations October 24, 2008. The state-of-the art ethanol production facility will consume 22 million bushels of locally-grown corn to produce 68 million gallons of ethanol annually.

POET Biorefining - Marion will provide a high performance, environmentally-friendly fuel as well as a premium, high-quality Dakota Gold brand livestock feed for regional, national and international markets.

POET Biorefining - Marion is pleased to be part of the Marion region, employing approximately 40 people and enhancing the local economy with improved corn prices, value-added markets for farmers, good-paying jobs, and increased local tax revenue.

POET™

Project Scope:

IPS began work on POET's Marion, Ohio Biorefining plant in February of 2008. This was one of the three plants that IPS would perform work at over a 2 year period. IPS was responsible for the carbon steel and stainless steel utility and production piping. POET acted as the General Contractor and IPS self-performed all piping work.

Project Facts

Project Duration

11 Months

Total Project Cost

\$3.2 Million
